QUESTION 1

Remote access to a CD-RW device on a machine on a LAN must be restricted to a selected user group. Select the TWO correct alternatives that describe the possible solutions for this problem.

- A. The remote access to these devices can be allowed to users by changing the display manager configuration and allowing sudo access for the user that will log in remotely
- B. The pam_console module allows access configuration to these devices via console, including simultaneous access by many users
- C. The pam_console module can be used to control access to devices via console, allowing/denying access to these devices in the user's session
- D. If the pam_console module is used, it must be checked as required, because it is essential for user authentication
- E. Through the sudo configuration file, it is possible to set users that will have the power of the root user, so they can access the devices. Besides that, it is important to configure the /etc/pam.d/su file, so the PAM modules can secure the service

Correct Answer: CE

QUESTION 2

All machines outside the network are able to send emails through the server to addresses not served by that server. If the server accepts and delivers the email, then it is a (n) _____.

- A. open email relay

Correct Answer: A
