QUESTION 1

Which component stores and retrieves application data, including report specifications, report output, security, and configuration data?

A. Gateway

B. Dispatcher

C. Content Manager

D. Presentation service

Correct Answer: C

The Content Manager service: Performs object manipulation functions in the content store, such as add, query, update, delete, move, and copy Performs content store management functions, such as import and export To make printers available to users when they distribute reports, you can create entries for printers and save them in the IBM Cognos content store.

Incorrect Answers:

B: The dispatcher is the entry point for IBM Cognos service requests sent by a Web server gateway or other software. The dispatcher handles the routing requests and balances the load of user requests to the various IBM Cognos services.

D: The Presentation service: Transforms generic XML responses from another service into output format, such as HTML or PDF Provides display, navigation, and administration capabilities in IBM Cognos Connection

QUESTION 2

Which statement is true when working with datasource credentials?

A. Users can view and delete datasource credentials from the My Data Sets page.

B. Users may be prompted for datasource credentials when they view, run, or open an entry, or when they use a schedule or a job.

C. When determining appropriate access to a datasource, the system first checks the user\'s profile to see if they have stored their own datasource credentials.

D. If a user wants to create a datasource credentials, the administrator must grant Write permissions for the Manage own datasource signons capability for the user.

Correct Answer: D

Problem(Abstract)

When running report user is prompted to enter the signon but the check box "?Remember my user ID and

password when connecting to this data source ?is not displayed .

User has no signon saved in his profile

Cause

User capability

Diagnosing the problem

Check the user capabilities and persmissions

Resolving the problem

Cognos Administrator must grant user/group execute permissions for the Manage own data source

signons capability

QUESTION 3

Where can a report or dashboard be saved?

A. folder, package, My content

B. data module, package, folder

C. hidden folder, My content, data module

D. Top Level of Team content, folder, package

Correct Answer: A

While you are working on your custom dashboard, save it locally in the My content folder. When you finish creating your dashboard, you can make it available to users with the WCM Report User role by copying it to your custom dashboard folder in Team Content. When you finish creating your dashboard, you can make it available to users with the WCM Report User role by copying it to your custom dashboard folder in Team Content.

QUESTION 4

An administrator wants to implement load balancing without using an external load balancing mechanism. What is one approach that can be used to achieve this?

A. Set up a standby Content Manager.

B. Install a gateway on each database server.

C. Configure dispatchers together with the content stores.

D. Configure gateways to direct all traffic to a dedicated dispatcher.

Correct Answer: C

If your installation includes more than one dispatcher, you can specify the proportion of requests that each dispatcher handles by changing their processing capacity. This is commonly referred to as load balancing. You typically set the capacity for a dispatcher based on the CPU speed of the computer where it is installed.

QUESTION 5

An administrator wants to ensure that a datasource can be referenced when creating data modules in the

IBM Cognos Analytics Portal (New > Data module).

What must be done to accomplish this?

A. Add the datasource to the list of supported datasources in IBM Cognos Configuration.

B. Configure the datasource in IBM Cognos Transformer so that it can communicate with the portal.

C. In the web-based modeling tool itself, specify the `Create Data Modules\\' access permission for the datasource.

D. On the Connection tab of the datasource properties, ensure that the `Allow web-based modeling\\' check box is selected.

Correct Answer: D

Problem(Abstract): Datasource connections not listed in Data server by default

Symptom: We can see the datasource in the Admin console but not in the list of data servers.

Cause: This is default behavior.

Resolving the problem

Go to the Administrative Console -> Configuration -> Set properties -> Connections tab.

On the bottom, you will see "Data source capabilities"

Inside that, check the box which says "Allow web-based modeling"

Once you check this, the datasource would be present as data server.
