QUESTION 1

Which of the following is false about the safe use of fibers?

- A. Use dedicated tools and materials to clean fiber connectors and the optical ports of lasers.
- B. Use optical attenuators if receive optical power is too high.
- C. An optical module that is recessed straightly can be directly connected to an optical attenuator.
- D. Connect an optical attenuator to an IN port, not OUT port,

Correct Answer: C

QUESTION 2

Which of the following are true about the relationship between pointer justification and bit errors?

- A. Justification of a large number of pointers may cause bit errors,
- B. A large number of bit errors may cause pointer justification.
- C. Bit errors do not lead to pointer justification.
- D. Pointer justification does not lead to bit errors.

Correct Answer: AC

QUESTION 3

A warm reset on a board does not affect running services, while a cold reset on a board affects running services.

- A. TRUE
- B. FALSE

Correct Answer: B

QUESTION 4

Which of the following functions, when enabled, allows the transmitting laser of an optical port to be automatically shut down when the IN port fails to receive signals?

- A. LCAS
- B. ALS
- C. ALC

D. LPT

Correct Answer: B

QUESTION 5

What are the procedures of handling discrete services on the NMS?

- A. Check the consistency between NMS data and NE data.
- B. Check the consistency between the fiber connections created on the NE and physical fiber connections.
- C. Search for protection subnets, and ensure that all protection subnets are searched out and properly configured.
- D. After discrete services are searched out, the NMS analyzes the discrete services based on the displayed causes and solutions.
- E. After discrete services are searched out, delete the discrete services on the NMS.

Correct Answer: ABCD
